Q1.What is ERP?

ERP (Enterprise Resource Planning) is a type of software system that organizations use to manage and integrate crucial parts of their business operations. ERP integrates all of the departments such as finance, human resources, manufacturing, supply chain, services, procurement, and others. This integration helps improve efficiency, data accuracy, and decision-making within the organization.

Q2.What is ABAP?

ABAP (Advanced Business Application Programming) is SAP's high-level programming language used for developing applications on the SAP platform. It is primarily used for creating custom reports, interfaces, forms, and enhancements within the SAP environment. ABAP enables the manipulation of data, customization of business processes, and integration with other SAP modules and systems.

Q3.What is ALV?

ALV (ABAP List Viewer) is a powerful tool in SAP that allows for the flexible display of lists and tables. It enhances the presentation of data with functionalities such as sorting, filtering, summing, and interactive user interfaces, making data analysis and reporting easier.

KNA1 Table

The KNA1 table in SAP is the central master data table for customer information. It stores general data about customers that are applicable across all organizational levels within an SAP system. Key fields in the KNA1 table include customer number (KUNNR), name (NAME1), address (ORT01), and country (LAND1). This table is essential for managing customer-related data in SAP's Sales and Distribution (SD) module.

KNA1 Table fields Explanation

1. KUNNR (Customer Number):

Description: Unique identifier assigned to each customer.

Purpose: Used to reference the customer in transactions and records throughout the SAP system.

Data Type: CHAR (Character string).

2. NAME1 (Customer Name):

Description: Primary name of the customer.

Purpose: Used for identifying the customer in transactions, reports, and other documents.

Data Type: CHAR.

3. ORT01 (City):

Description: The city in which the customer is located.

Purpose: Part of the address information used for shipping, billing, and communication purposes.

Data Type: CHAR.

BSAD Table

The BSAD table in SAP stores data about cleared items in Accounts Receivable, including document numbers, customer account numbers, clearing dates, and related financial details.

BSAD Table fields Explanation

1.BELNR (Document Number):

Description: Unique identifier for financial documents.

Purpose: Used to track and reference specific accounting documents in financial transactions.

Data Type: CHAR.

2.BUKRS (Company Code):

Description: Identifier for the company code, representing an independent accounting unit.

Purpose: Specifies which company the transaction belongs to, crucial for financial reporting and consolidation.

Data Type: CHAR.

3.AUGDT (Clearing Date):

Description: Date when the customer invoice was cleared.

Purpose: Used to track when payments were made and reconciled, important for financial reconciliation and reporting.

Data Type: DATS (Date).
